

Decoflex & PET

DECOFLEX and **PET** are essential tools for your **advertising campaigns**. Due to their magnetic properties, these elastomers are infinitely **repositionable** and will not damage your display materials. DECOFLEX and PET can be used **indoors** and **outdoors** for displays, advertising, banners, signage, etc. They are very easy to cut, and their good resistance to water, alcohol, detergents, and weather make them effective communication elements for outdoor advertising.

*Indoor display
(on Arelec Solution ferrous adhesive rubber)*

Bodywork display

DECOFLEX consists of a white PVC film laminated to a thin layer of magnetic rubber coated with a protective varnish. This PVC film is **printable on solvent, eco-solvent, and UV printers**. Made of a white Polyethylene Terephthalate (**PET**) film coated with a thin layer of bonded magnetic powder, this PET film is **printable on solvent, eco-solvent, HP latex, and UV printers**.

After printing, the entire surface of the film can be unrolled and magnetically attached to any smooth metal surface or ferrous format from the Arelec Solution range. In addition to existing formats, Arelec Solution offers custom sizes.

Model	Thickness (in mm)	Length (in m)	Width (in mm)	Typical force (in g/cm ²)	Features	Reference	Quantity per smallest packaging
DECOFLEX	0.6	30	620	20	Matt White	0679004	30
		20	1200	20	Matt White	0679015	20
		20	1020	20	Matt White	0679017	20
	0.8	10	1000	35	Matt White	0689061	30
		30	620	35	Matt White	0681020	30
PET	0.3	30	1370		Matt White	0279001	30
